

ENVS 4110/6110 - FALL FISHERIES & WILDLIFE POLICY & ADM. (AKA - HUMAN DIMENSIONS OF WILDLIFE MANAGEMENT)

Course Description: This course will focus on the human dimensions of wildlife management. Wildlife management traditionally focused on wildlife and habitat. Today, we recognize that humans are an integral part of the wildlife management process. However, working with the "human dimension" requires a different skill set than being able to place radio-transmitters on sage grouse or document predator impacts on a deer population. In this course, students will focus on social science and stakeholder engagement processes, and their various interactions in wildlife management programs. Students will be encouraged to apply these concepts to current wildlife management issues.
